FOR IMMEDIATE RELEASE

REALIZEIT INTRODUCES RELEASE 3 OF ITS ADAPTIVE LEARNING PLATFORM
Release 3 – Competency-Based Learning. Multi-tiered Personalization. New user experience across devices.

PALATINE, ILLINOIS, April 14, 2016 – Realizeit, the leading adaptive learning solutions company, announced the general availability of Release 3 of its adaptive learning platform. The key features in this release include enabling multi-tiered personalization, support for competency based learning formats and a new user experience across all devices for students and teachers.

Release 3 extends and enhances Realizeit's proven, enterprise-grade adaptive learning system that currently enables real-time personalization capabilities and provides actionable insights to students and teachers in over 300 courses. "This release is a direct response to the growing demand from pioneering institutions to support truly personalized learning experiences in competency based formats in addition to the traditional formats" said Manoj Kulkarni, CEO of Realizeit.

Multi-tiered Personalization: In addition to existing capabilities that enable delivery of real-time personalized experiences at the lesson, module and full course levels, institutions can now personalize whole programs in both traditional and competency based formats. The new program level personalization capability enables institutions to offer greater control and ownership for students to personalize their learning pathways aligned with industry and employer-specific competencies.

Competency-based Learning: Institutions can now leverage the Realizeit platform to deliver competency based programs in addition to traditional credit hour based courses and programs. At their core, both formats leverage Realizeit's adaptive learning engine to deliver personalized learning. Students' levels of mastery can be measured at a granular level and tracked simultaneously to competency based and traditional objectives based outcomes. This enables institutions to easily manage the migration to competency based formats.

New User Experience Across Devices: Release 3 debuts a completely redesigned student and instructor experience enhancing collaboration and student engagement. The experience is responsive to the device: PC/Mac, smartphones and tablets.

"Our goal is to provide institutions with the ability to engineer the curriculum and instruction to be continuously responsive to the individual needs of the student, to better articulate the relevance of their education to employment and to provide a highly engaging learning experience, all in service to helping every student attain the required mastery levels in the most optimal way." said Kulkarni.
